PROFESSIONAL SUMMARY

AWS DevOps Engineer with 3+ years of experience building and automating cloud infrastructure for production applications. Proven expertise in multi-environment CI/CD pipelines, Kubernetes orchestration, and Terraform-based Infrastructure as Code. Skilled at owning infrastructure end-to-end — from VPC architecture and IAM security to EKS deployments and CloudWatch observability — while collaborating closely with development and QA teams to ensure smooth, reliable releases.

TECHNICAL SKILLS

Cloud (AWS): EC2, VPC, IAM, S3, RDS, EKS, ECS, ECR, ELB, Auto Scaling, Route 53, CloudWatch, CloudTrail, SNS, ACM, Secrets Manager

Infrastructure as Code: Terraform (reusable modules, remote state, multi-environment), Ansible

Containers & Orchestration: Docker, Kubernetes, Helm, RBAC, Nginx Ingress Controller

CI/CD & Security: GitHub Actions, Jenkins, Trivy (container scanning), SonarQube (code quality)

Monitoring & Logging: Amazon CloudWatch, Prometheus, Grafana, New Relic

Databases: PostgreSQL, Amazon RDS — migration, backup, restore, replication

OS & Scripting: Linux (Ubuntu, Amazon Linux), Bash Scripting, Linux Administration

Deployment Strategies: Blue-Green Deployments, Rolling Updates

Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

AWS DevOps Engineer | [Eptpravahaa Edutech Solutions](#)

Nov 2025 – Present

Managing cloud infrastructure for LMS and Rudra Ride applications across Dev, QA, UAT, and Production environments.

- Provisioned and maintained AWS infrastructure (EC2, VPC, IAM, S3, RDS, EKS, Route 53, ALB, Auto Scaling) across 4 environments, ensuring consistent and repeatable deployments.
- Designed and maintained GitHub Actions CI/CD pipelines for automated build, test, Docker image creation, and Kubernetes deployment — significantly reducing manual release effort.
- managed full Kubernetes stack including Deployments, Services, ConfigMaps, Secrets, Persistent Volumes, Ingress, RBAC, and Helm charts.
- Configured Nginx Ingress Controller with SSL termination and path-based routing; managed SSL/TLS certificates via ACM; secured credentials using Secrets Manager.
- Applied Blue-Green deployment strategy to minimize production downtime; configured CloudWatch dashboards, alarms, log monitoring, and enabled CloudTrail for audit compliance.
- Managed PostgreSQL databases on RDS and EC2 — including migration, backup, restore, replication, and cross-environment data movement.
- Coordinated full Android app release pipeline: AAB generation via Expo, Google Play Console setup, app signing, and staged production rollouts.
- Integrated Exotel communication platform including messaging and call templates for application notifications.

DevOps Engineer | [Primus Global Technologies](#)

Nov 2021 – Feb 2024

Designed and operated cloud infrastructure, CI/CD automation, and container orchestration for enterprise-grade applications.

- Designed and deployed complete AWS infrastructure using reusable Terraform modules for EC2, VPC, IAM, S3, RDS, Route 53, ALB, and Security Groups across multiple environments.
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions, automating end-to-end build, test, and deployment workflows for multiple applications.
- Containerized applications using Docker; managed images via Amazon ECR; deployed and operated Kubernetes workloads with Helm, Ingress, RBAC, and persistent storage.

- ▶ Configured secure VPC networking with public/private subnets, NAT Gateway, Internet Gateway, Route Tables, and Network ACLs; managed IAM following least-privilege principles.
- ▶ Integrated Trivy and SonarQube into CI/CD pipelines for automated vulnerability scanning and code quality enforcement before production releases.
- ▶ Implemented Blue-Green and Rolling deployment strategies; configured CloudWatch dashboards, alarms, and log groups; enabled CloudTrail for full API audit logging.
- ▶ Managed AWS Secrets Manager for secure credential storage; handled SSL certificates via ACM; performed Linux system administration across environments.

KEY PROJECTS (Independent Upskilling — Mar 2024 – Oct 2025)

1. AWS Infrastructure Automation with Terraform

- ▶ Provisioned complete multi-environment AWS infrastructure using reusable Terraform modules covering EC2, VPC, IAM, S3, RDS, Route 53, and ALB — with remote state management and consistent environment parity across Dev, Staging, and Production.

Stack: AWS, Terraform, EC2, VPC, IAM, RDS, S3, Route 53, ALB, Security Groups

2. Kubernetes Deployment Pipeline

- ▶ Containerized applications using Docker and deployed to Kubernetes clusters via Helm charts. Configured ArgoCD for GitOps-based continuous delivery with automatic drift detection. Implemented RBAC policies, Nginx Ingress, ConfigMaps, Secrets, and Blue-Green deployments with zero-downtime rollouts.

Stack: Docker, Kubernetes, Helm, Nginx, Prometheus, Grafana

3. Secure CI/CD Automation with Integrated Security Scanning

- ▶ Built GitHub Actions pipelines with Trivy container vulnerability scanning and SonarQube code quality gates integrated as mandatory pipeline stages. Automated Docker image builds, security checks, and Kubernetes deployments end-to-end.

Stack: GitHub Actions, Docker, Kubernetes, SonarQube, Trivy

EDUCATION & CERTIFICATIONS

Bachelor of Computer Science — Telangana University

2018

Certifications: AWS Certified Solutions Architect / DevOps Engineer Professional — in progress
